DETAILED ACTION

State of the Claims

Applicants reply dated August 28, 2010 amends independent claim 10 and adds new claim 19.

Claims 1-19 have been presented in the application. Claims 1-9 and 18 have been cancelled by Applicant, and no claims stand as being withdrawn from consideration. Therefore, Claims 10-17 and 19 are pending for prosecution on the merits.

Allowable Subject Matter

Claims 10-17 and 19 are allowed.

The United States patents to Gelo (US 4,661,236) and Elias (US 2,119,009) constitute the closest related prior art of record.

Elias teaches providing an inner tube (20) coaxially arranged within an outer tube (24) and fusion joining the outer tube to the inner tube. Elias teaches that the outer tube comprises a tapered portion (see (26) in figure 2) which is removed from the coaxial tubes after fusion joining (see (28) in figure 3). Elias teaches that the taper portion is a feature of the outer tube prior to fusion bonding with the inner tube, thus Elias is silent regarding the use of an auxiliary glass tube which is fusion bonded to the outer glass tube as recited in claim 10, lines 9-17 and in claim 19, lines 9-15. Further, Elias fails to teach a step of removing a remainder of the auxiliary glass tube from the outer tube.

As noted in the prior Official Action, Gelo teaches a step of fusing an outer tube 12(b) to an inner tube (10). Gelo further teaches a step of fusion bonding the outer glass tube (12b) with an auxiliary glass tube (12a) (see figure 2D). Gelo also teaches a step of removing at least a portion of the auxiliary glass tube (12a) from the outer glass tube (12b) (see figure 2A to 2B). However, Gelo does not teach that a remainder of the auxiliary glass tube is removed from the outer glass tube after the step of fusing the auxiliary glass tube with the outer glass tube as recited in claim 10, lines 18-22. Stated alternately, the order of arranging and fusing of the glass tubes in Gelo is different from that set forth in the present claim language and one skilled in the art would find no motivation to rearrange the Gelo process steps in view of the prior art of record to derive Applicants claimed invention.

With respect to claim 19, Gelo teaches that the outer tube is fusion bonded to the inner tube (see figure 4a) at "a media side end" of the tubes. Gelo then instructs (see figure 2b to 2D) that the auxiliary glass tube (12a) is fusion bonded to the outer glass tube (12b) at a side which is opposite to the "media side end" of the outer tube. Therefore, Gelo fails to teach a step of "fusion joining the outer glass tube with the auxiliary glass tube at said media-side end of the outer glass tube" as recited in claim 19, lines 14-15.
